CASE STUDY

Harmony Purple Helps Major Manufacturer Manage Risk

THE COMPANY

The company is a large manufacturer of systems and components for railways, commercial vehicles and construction vehicles. The company owns and operates over 30 divisions engaged in the development, production and maintenance of transportation equipment.

THE CHALLENGE

The company needed to establish information security standards and practices across its 30+ divisions. Many of these divisions were exposed to vulnerabilities due to outdated systems, tools and lack of resources. The company needed a vulnerability and patch management solution that could quickly reduce vulnerabilities and risk across all of its divisions.

THE SOLUTION

The company evaluated several leading vulnerability management solutions.
Harmony Purple came out on top due to:

- Accurate, agentless system discovery
- Low impact scanning
- Best system for prioritizing hosts needing patching
- Lower cost to buy and operate

In addition, Harmony Purple's unique Attack Path Simulation™ (APS) was a critical element in their selection. APS identifies which systems need high priority patching based on whether an attacker can exploit a vulnerability to hack a host, and identifies the level of risk posed to critical assets. This capability enabled them to reduce risk more efficiently across the enterprise.

THE RESULTS

Onboarding Harmony Purple was fast and trouble free. One security officer from the company working with one vendor rep installed and configured the system. Discovery and scanning were automatic. The company now has standards for scanning and vulnerability management across all its divisions. The remediation recommendations and status reports are clear and easy for IT to implement. The IT department was able to reduce risk levels by implementing a combination of patching and other remediations based on scanning and analysis results provided by Harmony Purple.

ABOUT ORCHESTRA GROUP Orchestra Group's mission is to address the major roadblocks that make it difficult for CISOs, CIOs, and their teams to manage cybersecurity risk. Orchestra Group addresses these challenges by combining management and operations of IS, IT, Risk and Compliance into a single platform. Visit us at www.orchestragroup.com
