

Real-Time Automation for Mainframe Modernization

- Convert mainframe jobs to the cloud with ease
- Schedule mainframe, distributed, and emulated mainframe jobs from one platform — even within the same workflow
- Integrate mainframe applications with modern technology
- Enable real-time, event-based automation
- Orchestrate tasks in any third-party application

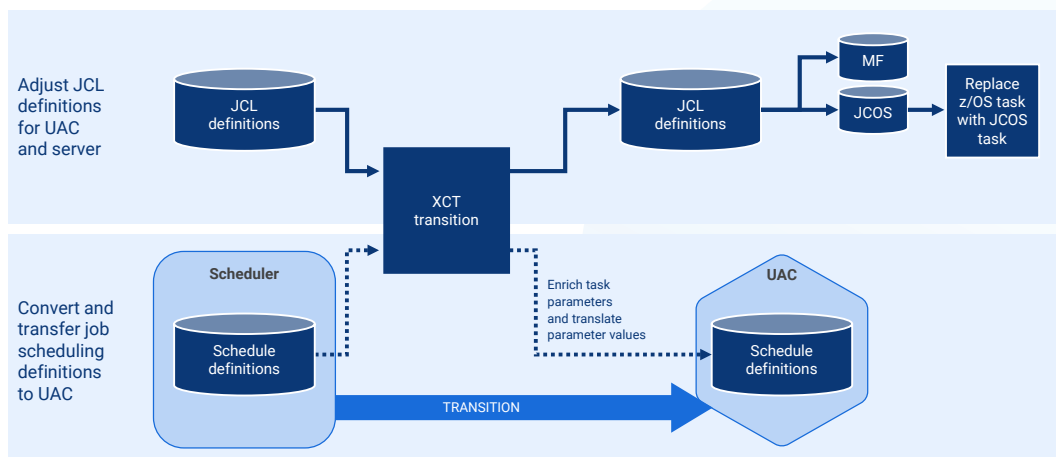

Overcome the automation challenge.

When planning a mainframe modernization initiative, automation is one critical area that may initially be overlooked. Automated IT processes run mission-critical business processes across the entire organization. They cannot stop for any reason.

For a smooth transition, you need to monitor, optimize, and automate your tasks — regardless of where they sit. Unfortunately, many traditional automation tools can't bridge the gap to the cloud. Worse yet, modern cloud schedulers can't connect with on-premises systems.

Universal Automation Center (UAC) is a modern solution to orchestrate and automate workloads across different infrastructures and applications. UAC provides end-to-end observability and reporting, allowing you to measure the impact of your automation initiatives and optimize performance accordingly.

Automated approach to convert job schedules to the cloud

Modernized service orchestration and automation with Stonebranch

Stonebranch Universal Automation Center (UAC) integrates seamlessly with any cloud service provider or third-party system. The solution enables a high-availability, template-driven approach to shift existing mainframe batch schedules to the cloud. Step into the future with event-based automation for re-platformed or refactored mainframe applications.

- **Convert Mainframe Jobs with Ease:** the Stonebranch Xpress Conversion Tool (XCT) automates the conversion of existing mainframe schedules to run in cloud-based environments.
- **Simultaneous On-Premises and Cloud Automation:** run automation in both the mainframe and on the cloud simultaneously while you convert – keeping mission-critical workloads running no matter where they reside.
- **Upgrade Automation to Real-Time:** transform legacy time-based batch jobs into real-time event-driven automation.
- **Enable Self-Service Automation:** the role of automation has grown beyond IT Ops. Easily empower data teams, developers, line-of-business users, and more with self-service access.
- **Orchestrate Any Application:** In addition to automating mainframe applications, integrate any application into your workflow. Break down automation silos and truly orchestrate processes across the enterprise – at scale.
- **Limitless Integrations:** integrate with any platform or application from the mainframe to the cloud. Use prepackaged integrations, build your own, or download integration blueprints from the community-driven, open-source Stonebranch [Integration Hub](#).

Stonebranch Simplifies Real-time Automation

Stonebranch builds IT orchestration and automation solutions that help enterprises break down automation silos while gaining centralizing control of automated jobs, tasks, and workloads.

The Universal Automation Center platform supports your entire hybrid IT environment, including on-premises, cloud, and containerized microservices. The platform runs automation in real-time, responds intelligently to business needs, and integrates with just about any application or platform you can throw at it.
